

# BOLL KING

**BOLL KING** is a proprietary formulation of nutrients, micronutrients, organic acids, natural fermentation extracts, diterpines, and extracts of *Ascophyllum nodosum*. It is designed for foliar application to cotton at reproductive stages for increased blooming and fruiting.

- **BOLL KING** components and ratios are designed only for cotton during its reproductive stages for increased blooming and boll set. It should not be used on any other crop.
- The natural biostimulant compounds are in ratios specific to cotton!
- All components, nutrients, biostimulants, fermented compounds, enzymes, and carbon synergists, are specific to cotton in reproductive stages.
- **BOLL KING** should be applied only on cotton with adequate field moisture.
- If there is adequate field moisture **BOLL KING** can be effective as a stress mitigator in cotton, but if there is evidence of premature cotton cut out, **BOLL KING** should be replaced by MITIGATE-S in the cotton production program.
- **BOLL KING** encourages heavy blooming, boll set, and reduces square and small boll abortion.
