

# BORO GRO

**BORO GRO** is a concentrated auxiliary boron compound designed for use on most crops. Boron is a critical link in crop production. Most agricultural crops must utilize significant amounts of nitrogen, and nitrogen must have boron to work. Boron & nitrogen are an inseparable duo in the quest for increased yield & quality. Boron availability is particularly critical to crops that bloom and set fruit. They are most often found critically deficient in availability at the development stage where yield components are being formed.

Foliar applications of **BORO GRO** will amend this critical nutrient short fall regardless of the soil conditions

- Increased flower retention
- Lower number of fruit malformations increasing quality and marketability
- Helps in the transportation of sugars & nutrients from leaves to fruiting points
- Boron insures optimum fruit fill & reduces premature abortion of fruiting components

## CAN YOU TAKE THE RISK OF BEING BORON DEFICIENT?
