

COLONY-AG is a proprietary FORMULATION OF SELECT SOIL BACTERIA IN STABLE SPORED FORM. It is a highly soluble powder with a high carbon food source after the spored bacteria re-vegetate upon contact with water. Soil bacteria are the work horses of the soil & in the scheme of nature they must sit at the first table or our crops will not be able to utilize soil nutrients. Soil bacteria are the foundation of the three essential dimension of the soil.

Any disruption of the biological balance of the soil will result in the disruption of the other dimensions as well.

COLONY-AG is stable & has a long self life due to the fact that all microbes are held in a non-vegetative state until they are applied.

BENEFITS:

- Greater Efficiency of applied fertilizers
- Increased organic matter & activity
- Better water Utilization
- Better soil tilth
- More rapid conversion of crop residue to humus

EASY TO USE:

- Mix with liquid fertilizers
- Impregnate onto granular fertilizers
- Spray on soil before or after planting

**SHOULD NOT BE MIXED WITH PESTICIDES OR
CONCENTRATED COPPER COMPOUNDS.**
