

CONNECT

CONNECT is a unique formulation of plant nutrients fortified with natural biostimulants, proprietary carbon synergists, and plant fermentation extracts. Though a proprietary process we are able to incorporate many important features into one product.

- Product is acidic enough to cut through tough leaf waxes to contact the leaf membranes.
- Product is a net negative in charge and will be immediately drawn into the crop by the positive hydrogen ions in the plant itself insuring rapid utilization.
- High phosphorous content gives crop needed energy source to super charge the Krebs Cycle in the production of Adenine Triphosphate, (ATP)
- Calcium content stimulates cell division and alleviates oxidative stresses in crops.

CONNECT PRODUCT FEATURES:

CONNECT is an ideal management tool to improve quality, durability, and taste in many food crops including;

- Vegetables
- Connect is an especially good tool in apple and peach production.
- Great for strawberry producers in improving color, durability of fruit and taste.
- Fruits of all types
- Berry crops of all types
