

Crud Buster

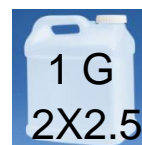

Spray Tank Cleaner with Ammonium

Use in a WELL VENTILATED area only.

CRUD BUSTER is a proprietary concentrated cleaner containing high levels of ammonia and detergents. It is designed for use in Agricultural Sprayers for the purpose of cleaning out pesticide residues. Crop injury due to contaminated sprayers is a continuing problem. This problem can be avoided by ensuring that sprayers are properly cleaned between tank loads.

- **Interior and Exterior Cleaning**
- **Special Preps Parts**
 - Screens
 - Nozzles
 - Booms
- **Hose Cleaning**
- **Pump Cleaning**

General cleaning guidelines- To avoid drying and hardening of pesticide residues and potential corrosion and damage to equipment, clean the sprayer immediately following an application. If you are switching products or crops, a more thorough cleaning is required. Be sure to clean the entire sprayer system, not just the tank. Operate the pump and flush the cleaning solution through all hoses, strainers, screens, nozzles, and the boom. Small amounts of residue left in these areas can be sufficient to cause serious damage to a sensitive crop. Most injury occurs when switching between crops. Do not allow run off to touch crops.
