

# DUROX

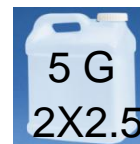

**DUROX** is a proprietary formulation of calcium, magnesium, and boron designed for foliar use on a wide array of crops. It is fortified with the carbon synergist (**SYNERGIZE C-3**), and **ENERGIZE FE**, a proprietary combination of natural biostimulants and plant fermentation extracts.

- Calcium is often low in availability in most agricultural soils yet is critical to cell division, systemic acquired resistance functions, and plant respiration.
- Magnesium, the key component in chlorophyll is also often limited in availability resulting in lower than desired photosynthetic efficiency of the crop.
- Boron is key to the utilization of Nitrogen and other important functions surrounding yield potential
- The Carbon Synergist (**SYNERGIZE C-3**) is a key to nutrient conversions and utilization within the crop.

**DUROX** is used on many high value crops to achieve the following:

- Better Color And Taste, (Fruit, Berries, Vegetables, Tomatoes, Peppers, Etc.)
- More Durable Fruit/Produce (Shipping Integrity).
- To Prevent Physiological Disorders Associated With Certain Deficiencies, (e.g., Black Heart in Celery, Blossom End Rot In Tomatoes, Albino Fruit Strawberries).
