

# Endow

- SUPERIOR Penetrant Deposition Aid
- Spray Tank Acidifier

**ENDOW** is a proprietary formulation of non-ionic penetrating adjuvant which greatly reduces “off target” spray drift. The organic acid constituents reduces spray water (pH) thus reducing potential pesticide loss due to precipitation.

- Surfactant properties improve spray droplet deposition, increases adhesion to leaf surfaces
- Penetrant properties maximizes effectiveness of pesticides, particularly systemic pesticides making **ENDOW** an excellent tank mix companion with herbicides, insecticides, fungicides, miticides, & foliar applied nutrients
- Acidification properties reduce the degradation of many pesticides caused by high (pH) water

**ENDOW** is an excellent choice for addition to all spray tanks. It is particularly beneficial with the following:

- Weak Acid Herbicides, (e.g., Glyphosate,)
- Insecticides
- Defoliants
- Desiccants
