

# FORAGE BOOST

**FORAGE BOOST** is a proprietary formulation of major and micronutrients fortified with natural biostimulants, and plant fermentation extracts designed for use on forage crops, hay crops, and pastures to incite rapid growth and development.

## Use **FORAGE BOOST** in the following applications:

- Early season, after dormancy break in perennial grasses, or after emergence in planted forages to stimulate rapid growth and development.
- Field crop forages, apply early for rapid growth, and repeat to substantially increase tonnage per acre.
- Hay crops, apply in early spring to speed up first cut. Apply 7-10 days after each cut to speed regrowth.
- Alfalfa, apply after each cut to encourage regrowth, increase tonnage, and improve quality. Excellent for dairy alfalfa to increase protein and lower ADF (Acid Detergent Fiber).
- Pasture and rangelands, apply to get rapid recovery from overgrazing.

**When sprayed on pasture or rangeland the re-entry of cattle can be immediately upon the drying of product on leaf surfaces.**
