#### AVOID EYE CONTACT

### DESCRIPTION

FORAGE BOOST is an auxiliary nutrient formulation for use as a foliar supplement on all hay crops, pasture, and forage crops. It is fortified with low molecular weight organic acids, and proprietary plant extracts. It can be applied at any time for increased quality, rate of growth, and overall yield, but it is particularly effective for regrowth after cutting or grazing.

#### **COMPATIBILITY**

FORAGE BOOST is tank mix compatible with most nitrogen solutions, but should never be mixed with phosphate fertilizers. Where compatibility is unknown, always conduct standard quart jar test prior to tank addition.

#### HOW TO APPLY

Apply with any equipment that delivers a fine even spray mist to plant foliage. Allow 8-10 hours after application before the reintroduction of cattle.

### **GENERAL RECOMMENDATIONS:**

General rate of application is 1.5-2.0 quarts per acre.

- Early season, 1.5-2.0 quarts per acre
- Regrowth after cutting, 2.0-2.5 quarts per acre
- SWEET SORGHUM: Apply 2.0-2.5 quarts per acre early in growth period
- WINTER RYE and FESCUE: Apply 1.5-2.0 quarts per acre. Can be repeated as grazing dictates.
- ALFALFA: Apply 2.5-3.0 quarts per acre approximately 7-10 days after each cutting.
