

HISUL PLUS

HISUL PLUS is a combination of extremely low micron sulfur in a colloidal dispersion and fortified with natural biostimulants.

We all know the importance of nitrogen in modern crops production. What is often overlooked is that in most of our agricultural soils sulfur has been lost to either crop removal or years of leaching. Without sulfur we will not utilize nitrogen efficiently regardless of how much is applied.

- **HISUL PLUS** provides critical sulfur to the crop in a usable form at key development stages.
- Natural biostimulants allow the crop to function at its maximum genetic potential.

HISUL PLUS IS FOR USE ON MANY CROPS!!

- **Cotton**
- **Corn**
- **Soybeans**
- **Rice**
- **Forage Crops**
- **Small Grains**
- **Beans, Peas, & Lentils**
- **Sunflower**
