

IMPACT-K

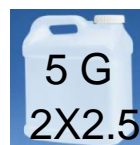

IMPACT-K is a proprietary blend of slow release nitrogen, chlorine free potassium, sulfur, & fermented plant extracts. Its primary design is for foliar application, but it can be injected into sprinkle irrigation systems. **IMPACT-K** is versatile in use, application, & can be used in conjunction with other fertilizer solutions in both pre-emergent, & post emergent sprays.

IMPACT-K PRODUCT FEATURES:

- High level of crop safety
- Increased plant absorption of all spray components
- Increased translocation
- Superior source of potassium and sulfur for oxidative stress mitigation
- Increased remobilization after absorption

IMPACT-K Application Information: Use on all field & specialty crops to enhance growth, quality, & performance. Corrects nutritional deficiencies, & helps crops rebound from environmental stresses. The solution for solving nutrient uptake during peak demand periods.
