

PEANUT PRO

PEANUT PRO is a proprietary formulation of nutrients, natural biostimulants, carbon synergists, plant fermentation extracts, and enzymes. It is for use on peanuts as a foliar management tool at the “PEG DOWN” stage to encourage and stimulate peg down and nut formation.

WITHOUT GOOD PEG DOWN PEANUT YIELD POTENTIAL IS SEVERELY COMPROMISED.

PEANUT PRO ALSO CONTAINS: Fulvic Acid, Ulmic Acid, Hymatheomelaic Acid, Ascophyllum nodosum extracts, Chondrus crispus extracts and Amino Acids. When used as directed it facilitates the maximum successful peg down of the peanut crop.

PEANUT PRO contains those essential nutritional and biostimulant components that the crop needs at this critical development stage that the crop often cannot produce in sufficient quantity at this development stage.
