

SMART SPRAY

SMART SPRAY is an organosilicone spray adjuvant/surfactant. **SMART SPRAY** is a proprietary blend of chemical uptake enhancement compounds and highly active silicone surfactants. **SMART SPRAY** is a unique non-ionic spray adjuvant that gives maximum wetting and spreading of pesticides, defoliants, and nutrient solutions.

Application Benefits:

- Extremely Active Spreading Agent Even At Low Rates.
- Use With All Pesticides, Defoliants And Desiccants.
- Very Low Per Acre Cost
- Leaves No Harmful Residues On Decomposition

SMART SPRAY technically could be considered to be both an adjuvant and a surfactant. Surface active agent in its simplest terms this is a compound that breaks the surface tension and allows water droplets to spread out and cover a wide area without excessive “run off” to the ground with subsequent loss of effectiveness of the active chemical ingredient being applied.
