

SOYASTIM-27

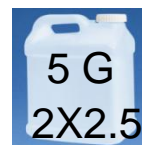

SOYASTIM-27 is a proprietary formulation of major and micronutrients sequestered in humic and fulvic acids. It is fortified with extracts of *Ascophyllum nodosum* and *Chondrus crispus*, enzymes, amino acids, and natural diterpenes. When used as directed the components will enhance blooming and pod set on beans (soybeans and edible beans) and peas.

First Application Benefits:

- Plant develops with shorter internodes prepping the plant for maximum flowering
- Greater photosynthetic efficiency
- Biostimulant components counter environmental stress that can senesce the plant and reduce yield potential
- Healthier root system for better plant performance and increased soil fertilizer utilization

Pre-Bloom 2nd Application Benefits:

- Reduces Bloom And Pod Abortion
- Increased Blooming
- More Seed Per Pod
- Better Pod Set
