

SYNERGIZE C-3

SYNERGIZE C-3 is a proprietary formulation of carbon synergists, natural biostimulants, enzymes, and fermented plant extracts. It is designed for use with all standard fertilizers, (granular and liquid) to assist in the resolution to crop nutrient deficiencies.

Application Benefits:

- It can and is used as a proprietary ingredient in many of our mainline foliar products because of its ability to stimulate the opening of stomata on crops and plants making them very receptive to foliar uptake regardless of crop stress or field conditions.
- It can be used to combine with other liquid fertilizers that are soil applied where rates are as low as 4.0 fl. oz. per acre combined with mixed liquid fertilizers or nitrogen solutions to give tremendous increases in efficacy of those products due to increased uptake. It is particularly effective where the liquid fertilizer mix is a phosphate.
- Is available as a component of our proprietary foliar applied products and as a standalone additive to other fertilizers.
