

SYNERGIZE IV

Natural Crop Growth & Stimulation

SYNERGIZE IV is an auxiliary crop nutrient compound that is effective on more than 56 crops. The nutritional components are sequestered in a wide range of low molecular weight, highly bioactive organic acids, natural plant extracts, and fermentation extracts. This unique combination of ingredients makes **SYNERGIZE IV** particularly effective in stimulating yield, and increasing crop components when it is applied either immediately prior to or early into the blooming or fruiting cycles of crops.

SYNERGIZE-IV IS MOST EFFECTIVE WHEN APPLIED AS A FOLIAR COVER SPRAY.

- Low use rates
- Affordable
- Excellent tank mix companion
- Can be used in a tank mix with Mepiquat Chloride
- For use on transgenic & non-transgenic crops
