

sustain

sustain is the key to effective Nitrogen management. It works by keeping Nitrogen in the Ammonium form where it is easier for the crop to take up and utilize. Nitrogen is for less susceptible to loss due to de-nitrification when in the Ammonium form.

sustain Application Benefits:

- Reduces volatilization, de-nitrification and soil leaching with Urea, Ammonium Nitrate, UAN, and Liquid Manure.
- Keeps nitrogen available in the crop root zone throughout key growth stages.
- No planting restrictions.
- Requires no special application equipment
- Optimizes crop yield
- Tank mix compatible with most pesticides
- Environment friendly, reduces nitrogen leaching and de-nitrification
- Non-Corrosive and easy to handle
