

Alfalfa

- **Seeding:** **KIHK** or **KIHK Plus** will be very beneficial, and especially in the western regions where moisture may be marginal.
- **Cover Sprays:** Approximately one week after each cut you have some choices of products to apply
 - For very rapid growth use **Hay Maker**, or if that is not on hand **HISUL** can be a viable substitute.
 - On fields where low fertility is known a tank mix of **Crop Power-47**, and a half rate of Hay Maker is indicated.

Note: In conjunction with either of the above, **Zin Pro-6** can be a valuable tank addition at approximate 1-1.58 pints per acre.

There will be 5-6 cuttings per season. You are selling

- Shorter times between cutting = \$
- More Tonnage = \$
- More Protein = \$ (Esp. to Export and Dairy)
