

Apples

Apples are unique in that within 50 days of petal fall the fruit will have developed as many cells as it will have at harvest. This should tell us a lot about application timing.

- **Early:** Immediately after petal fall apply **Crop Power-47**. An additional application in 14 days is advised and very beneficial.
- **Pre-Harvest Prep:** Apply **Connect** for Color, Taste and Durability.

Pears

Make **Crop Power-47** within 10 days of petal fall and repeat in 14 days.

Note: A pre harvest application of **Connect** will give better color, durability and taste.
