

Pecans and Walnuts

- Apply **Crop Power-47** in spring as small nuts begin to form. Repeat in 12-21 days.

NOTE: All nut trees benefit from Zinc applications (**ZinPro-6**)

NOTE: Nut trees need to hold leaves as late as possible so that the following year crop will not be negatively impacted. Therefore, an August to September application of **Crop Power-47** and **Zin Pro-6** may be advisable. (many pecan producers in the south may be applying insecticide for pecan weevil after the first rain in August. This is an ideal time to tank mix.)
