

4-EVER GREEN is a concentrated iron product with a bio-stimulant support that is excellent for both turf types. In turf grass management we must always be concerned with the greening effects of the products we select.

4-EVER GREEN SAYS IT ALL IN ITS NAME. It is a biostimulant product that is designed to be used on both cool and warm season turf types with good results and without any particular concern for hormonal imbalances of the cool season types. It should therefore be obvious that the biostimulant package in **4 EVER GREEN**, closely emulates the one in **TURF STAR**. The iron and magnesium are the keys to chlorophyll production. Magnesium in particular is often not available in sufficient quantities in many golf course greens.

ALWAYS REMEMBER, GOLFERS PAY GREENS FEES!!
