

**Hombre** is concentrated manganese. **HOMBRE** is a manganese chelate that can be used on any type turf grass (cool and warm season, fairways, roughs, etc.) **Hombre can be tremendously effective as a foliar cover spray, or it can be irrigated in after application.** When irrigated in, the chelated manganese will not immediately be “tied up” on the soil, and will remain available for plant utilization. Manganese is very often in short supply in turf grasses (especially golf greens), and its importance in enzymatic functions cannot be overstated. Manganese deficiency is also a contributor to many turf diseases.
