

Mago Verde is concentrated Magnesium, in particular with cool season turf (to a lesser but important degree warm season), there is always a need to control turf respiration.

MAGO VERDE (GREEN MAGICIAN) is a liquid chelated magnesium formulation that is sprayed onto the foliage of fine intensively managed turf grasses of all types. Magnesium is the literal anchor element of the chlorophyll molecule and very often the limiting factor in achieving the dark green color that is desired for golf courses and athletic playing fields etc.

MAGO VERDE is an excellent choice as a tank mix companion with virtually all the other fine PROTEA turf products.
