

MICRO GRO-30

Essential soil microorganisms must have a reliable food source to survive and proliferate. Lack of this food source is often a contributing factor to the decline in the population in the first place. **MICRO GRO-30** is a specifically designed food source for beneficial soil microorganisms. The thirty elements contained in **MICRO GRO-30** has been specifically identified by leading microbiologists as essential food sources for beneficial soil bacteria etc. These components include nutrients, vitamins, organic surfactants, natural photochemical, fermented plant juices (enzymes), co-enzymes, and amino acids. **MICRO GRO-30** should be a tank mix companion with both **COLONY** and **BLACK WIDOW**, and considering the importance of these organisms, regular applications to non-problem areas is a good management strategy.
