### DESCRIPTION

PAR-5 is a proprietary formulation of auxiliary plant nutrients designed for foliar use on intensively managed turf grasses such as golf courses and athletic playing fields. PAR-5 also contains antioxidants, enzymes, amino acid, and fermented plant extracts that promote turf growth and vigor.

### COMPATIBILITY:

PAR-5 should always be tested with standard quart jar method prior to tank mixing. Do not tank mix with phosphates.

### APPLICATION:

Apply as a light foliar mist covering entire target area. Best results will be obtained with spray volumes of 30-50 GPA, (285-475 L/Ha).

### GENERAL RECOMMENDATIONS:

- ❖ Cool Season Grasses: (Bent, Bluegrasses, Fescue, Rye). Apply only at periods of very low stress, 1-2 fl. oz. per 1000 f<sup>2</sup>. (30-60ml/100 m<sup>2</sup>). NOTE: During periods of low stress PAR-5 can be applied to these grass types at half rates in conjunction with full rates of TURF STAR.
- ❖ Warm Season Grasses: (Bermudas, Zoysia, St. Augustine, etc.). Apply first immediately after dormancy break at 3-5 fl. oz. per 1000 f<sup>2</sup> (90-150ml/100m<sup>2</sup>). Repeat every 10-14 days throughout season at 2-3 fl. oz. per 1000 f<sup>2</sup> (60-902 ml per 100 m<sup>2</sup>).
