

Penetrar Pellets are a superior soil surfactant designed for facilitating the movement of water down through the soil profile. This product was adapted from a superior surfactant that was used in the oil fields to pump down into the drill holes and clean drill bits without having to pull the drill stems. Suffice it to say that a product that is more active in penetrating dense difficult soils does not exist. Particularly in golf courses there are always areas that pose some water penetration problems, (e.g., approaches, high traffic areas, bunkers, and even greens). **PENETRAR SPRAY PAL PELLETS** TO THE RESCUE. It is the form and use of this product that makes it so user friendly. The product comes as a 250 gram solid pellet that is placed in the cylinder of a hose end sprayer. The product is then applied to the problem area as a hose syringing operation. SEE ALSO, **LIQUID PENETRAR FOR GENERAL SPRAYING**: Comes in a liquid and Pellet form. This is surfactant base helps in high traffic areas or anywhere you really need to flush the soil or keep it loose so that water can penetrate.
